1:Sanders Z-5,4 (1952-1959) 1962 EH1 Greece EH1

the buildings around the plateia catch the eye. The church with its bell tower and dome is easily spotted. The cemetery is at the edge of the village, we are told, "back there where you passed the row of tall cypress trees." The school is usually nearby. If school is in session, then the noise of children at recess can be distinctly heard, as can the bell which calls them indoors. A sign rather than the size of the building announces the headquarters of the local village council. Many villages have a cooperative society, identified by a sign on its office near the plateia. Other coffeehouses and one or two small grocery stores account for the rest of the buildings on the square.[2] The universality of these coffeehouses and small shops is shown in Table 1, presenting the services provided in eight villages of more than a thousand in population, in the early 1950s.[3] Some of the items deserve fuller explanation.

The flour mills. In the case of the Xanthe village, four of the flour mills were built during the occupation, the other two long before then. These mills operate not more than a total of thirty days each during the year because local grain production is very limited and also because local people get their ration flour ready-ground from the government.

The one flour mill in the Mesolongi village has an old engine which uses charcoal for fuel and which hardly works more than two days a week. Most of the time it is under repair. Many of the villagers are therefore obliged to take their grain to the mills of neighboring villages.

The bakeries. In the larger villages these find sufficient business to stay open not only to sell their goods but to bake throughout the day for the village housewives, who bring in either unbaked loaves of bread or some dish for the ovens. With fuel so scarce in many parts of the country, it is much more economical at times for a family to take an uncooked casserole to the commercial baker than to try to bake it at home.

The village stores. In one of the Macedonian villages the yearly gross sales of the seven stores run from just less than $700 for the smallest one to $3330 for the two largest. These same two largest ones extend over $1000 of credit each year, while the smallest one gives no credit.

The owners of these stores purchase their goods directly from wholesale dealers in Salonica and bring them to the village with trucks or horsecarts. They do not hire any outside laborers, but use their sons or family members for the work. All stores sell for cash, credit, or take different farm products as payment. The credit extended to farmers by the different shopkeepers depends on the financial situation and the economic standing of the customers. More credit is given to farmers who own livestock because they are able to pay back their debts at more frequent intervals than ordinary farmers, who can pay back their debts only once a year after harvest. No direct interest is charged on credit goods, but their price is usually such as to include the interest.

The studies cited contain much more information about these village stores. The stock carried may include food, clothing, and farm implements.

1:Sanders Z-5N (1952-1959) 1962 EH1 Greece EH1
Peloponnesos

will buy to put on his lead ram. Then he will pick another deep bell for his eldest ewe, but will always test it against the deepest bell for what seems to be harmony to his ear. As he buys the smaller bells with the higher sounds, he always compares each with the deepest bell. In a flock of about 200, he may have as many as 60 to 70 carefully tested bells. The sound of a flock grazing or in movement is always pleasing even to the casual passerby. But to the shepherd it is the sweetest music of all, for it is as though his own private orchestra were playing for him, telling him by each little sound much about the behavior of his flock. If one note is missing for very long, he becomes aware of it and investigates to see what is wrong. When all are ringing together, he feels his little universe is safe.

As I walked through the village, I tried to picture it in the cold and empty winter. Obviously, the people from Valtetsi scatter out quite widely once they get below. What kind of community can they maintain with such a migration pattern? The shepherd's answers to queries about organizational life gave a rough sketch of the Valtetsi community.

Like other villages, they have the village council. The president of the council, who happens to run a coffeehouse, must stay in the village throughout the year. He can, on occasion, get a two-week leave from the prefect in Tripolis.

"Suppose he owned livestock," I asked, "and had to take them to winter pastures below. What would he do?"

"Other members of his family would have to take care of the animals for him and he would remain here."

Local elections are postponed from winter until the return of most of the people in the spring. But for national elections the men leave the flocks with their womenfolk and older children and walk all the way back up to the village to cast their ballots.

Valtetsi also has its school board, church board, and a livestock cooperative that helps its members get some credit from the Agricultural Bank, with their flocks as collateral (it serves no marketing function). Yet the migration pattern affects even these organizations, for at the time of my visit the cooperative president had not yet returned from his winter's sojourn on the plain nor had all of the board members for the church or the school.

In spite of the periodic absence of its inhabitants, the loyalty to Valtetsi is strong. Not the least of village distinctions was the Battle of Valtetsi, in which local people claim that in 1821 the first victorious army of Greeks under Kolokotrones rose up against the Turks. Since the soldiers believed that the Virgin had aided that victory, taking part just as Hera and Athena did with their forces deployed in the Trojan War, a special church to the Virgin was built in the village in 1837. One of the most heinous

1:Sanders Z-5H (1952-1959) 1962 EH1 Greece EH1

does not hurt the dignity of the wife to be turned down, whereas it would make the man lose face.

Those familiar with village family life point out that wife beating is almost a thing of the past because women are learning that this is not the general rule and need not be endured. When I asked groups of young men whom I interviewed whether they thought they would ever beat their wives, one man said, "I probably will if I get drunk." Several said that they would beat her if she was not good, but they had a hard time defining what they meant by being "good." Another young man pointed out, "If my wife does not behave, I will make suggestions. If she doesn't change her ways, then I'll beat her." Beating, then, is no pastime but a last resort for keeping a wife in line. From time to time, a village woman may threaten to sue for divorce, but this is generally interpreted in the village as a desire on her part "to be fashionable" rather than as a way out of a bad bargain. Divorces are still under the jurisdiction of ecclesiastical courts and are very difficult to obtain. The growing legal rights of women as well as the social changes under way are making the woman, as well as her husband, think of herself as a human being and not as property to be owned and ordered about. This holds true in the villages as well as in the cities.

In 1952 the women were first given the right to vote in national elections, but they are rarely elected to an office and seldom make their way into governmental positions traditionally held by men. Village men generally agree that it is proper for women to have the vote but maintain that their women are not sufficiently educated to use the ballot wisely. In Attica a villager said that the women of his village were not yet "ripe" enough to be members of the local council, but then he added: "But we men just don't like the idea — that's nearer the truth." This lack of "ripeness" was interesting in view of the fact that in 1930 women won the right to vote in municipal elections if they could read and write and were over thirty years of age. In 1949 this was changed to allow any woman twenty-one years of age to vote, even if illiterate, in municipal elections.[8]

Nevertheless, any peasant woman who wants to get along with her husband had best concern herself with her household duties and assist in the farm tasks as best she can. Very much preoccupation with "women's rights" would tend to make her a spectacle in the village, thereby subjecting her husband to much teasing by the other men. If there is a public meeting, she is not supposed to attend, although she may stand with other women on the edge of the square to see the notables arrive and to watch proceedings from a distance. Americans connected with the United States Mission to Greece have adopted the tactic of trying to draw the women into more active participation in these public meetings and have been fairly successful in some of the villages where they have worked most intensively.

The patterns of deference required of women and their so-called rights

1:Sanders Z-5,4 (1952-1959) 1962 EH1 Greece EH1

vote, it is in sullen protest and not because of any wildly enthusiastic support for some new leaders seeking the reins of government. He does not think of government in abstract terms; he feels more comfortable talking about specific persons and events. He will know, for instance, that his country is a monarchy and that King Paul and Queen Frederika visited his village last year and drank coffee with the community president and that the queen went into one of his neighbor's homes to see how the housewife was weaving a particular pattern; he will know that there is such a thing as a national parliament, for his wife's second cousin, a representative there, regales them on occasional visits with all the smart things he does when he is in Athens.

Or, as happened in Phokia, a coastal village between Athens and Sounion, the community president interrupted our conversation on a cool September evening (in 1959) to show us pictures taken of himself with the shipping magnate, Onassis, and the Greek premier, Konstandinos Karamanlis. The former had anchored his luxury yacht off the shore near Phokia a few months previously and had invited the premier to come to Phokia, from which a small launch would take him out to the yacht for dinner. True to tradition, these personages received the greetings of the community president, posed for their photographs with him in a village taverna, and listened to his requests for funds to extend the village dock out to deeper water.

I often wondered whether the Greek villager was as interested in politics as the Athenian thought that he was, for I found many villagers almost totally ignorant of governmental affairs, a fact which could be duplicated among the least educated in almost every country. Indeed, many people who knew village life well said that the peasants were much more interested in talking about agriculture than national politics.

Greek Traditions of Local Government

The strongest governmental tradition in rural Greece is that of government by elders, who represent the accumulated wisdom and authority of the village. One would expect this in a family-centered society, but, in the case of Greece, it has been further reinforced by historical developments.

These influences are primarily Byzantine in character. True enough, one can go back to the city-state, or *polis*, of the ancient Greeks and show how even the settlements outside the fortified town, which were a part of the polis, had their representatives on its central council and played their part in raising military and financial levies in case of war; or one can trace the decline of the polis under Macedonian and Roman rule between 350 B.C. and 330 A.D. and assume that many of its earlier functions must have persisted. But it is not until the flowering of Byzantium that a transformation of local government took place. As Harold F. Alderfer has stated:

1:Sanders Z-5,4 (1952-1959) 1962 EH1 Greece EH1

175 623 642 Instead of being organized on the basis of individuals living in a geographic area, which was the classical mode, the community became a body of believers united by a common purpose. . . . Within this framework, new concepts of local government grew. One was the council as a vehicle for the consensus of the community as a whole. Another was the assembly of all members of the Christian community to give assent. Still another was the leadership of clerical authorities in local government and community activity. These ideas are indigenous to Byzantine culture and they are a part, even if not immediately visible, of present-day local government in Greece.[1]

With the fall of Byzantium in 1453, the Greeks came under Turkish rule. But the Muslim masters worked through already existing institutions, and Mohammed II went so far as to recognize the Patriarch of Constantinople as the political leader of the Greek nation. In the provinces, the metropolitan bishops, and priests exercised the rights given to the Patriarch, and his executors, through the *euphoria* (supervising committee) or the *demogerontia* (group of village elders). These village elders collected taxes from their compatriots, rendered justice when differences arose between Orthodox Christians, and settled any disputes which contesting parties referred to them. Basic to this self-government was the idea of the autonomous community, which centered around the elders selected by popular vote. These elders (*demogerontes*), in turn, selected "first elders" (*protogeri*), who administered the provinces and conferred with the monarch's counsellor in the provincial capital about the amount of taxes to be collected for that province, while each demogerontia tried to specify the share of each larger village, as well as the personal contribution of each individual taxpayer within a village.[2]

175 623 In addition to tax assessment and collection, the elders had many other important functions: they divided the uncultivated land or fields or any other land remaining without heirs, regulated the flow of waters, determined the rights of inheritance, handled the community's funds, and supervised the payments made by Christians to be relieved of military duty and the serving of court papers. Since the tax function remained paramount, the local authorities brought pressure to bear upon their compatriots, by advice or scolding, to pay what was due and to avoid any mishaps with the Turks. These leaders, because they supervised the tax collection, also had local funds to use at their discretion for the community. As Koukkidi says: "The great strength of the Greeks was the continuity of communal life. The community to them was a small democracy which organized its life and shaped itself."[3]

175 623 642 With the liberation of Southern and Central Greece, and the ascent to the throne of King Otho, the governmental patterns of Western Europe were imposed upon the traditional councils of elders. But this came at a time when, with the exception of the loyalty to the Patriarch, there was no

1:Sanders Z-5,4 (1952-1959) 1962 EH1 Greece EH1

governmental structure which tied together these separated local governments into any larger whole. Thus, as Greece moved toward modern nationhood, the type of local government which had existed under the Ottoman Empire began to wither.

One Athenian professor said to me that after ten years of revolution (1821–1830) the people wanted a king who could end anarchy and bring order. They had to accept a centralized government and put up with laws not natural to the country but which were necessary if Greece were to appear "civilized" enough to get loans from abroad. "We still need a legal system agreeing better with our country," he concluded. This is one reason, he thinks, why the peasant tries to get around the laws; he does not look upon them as his laws, as Greek laws.

During the first forty years of this century, the greatest changes in community life occurred under Venizelos in 1912 and under Metaxas in 1935. Venizelos, for instance, refashioned the old demes, or local units consisting of several villages, and made each village a unit responsible for supporting many local services under a community council and president. The deme still had the taxing, police, and judicial powers. The central government attempted to supply teachers for communities, a step which meant much less local autonomy but which was essential if Greece were to have a uniform system of education. Many other activities which local governmental bodies had handled up to this time had to be approved by the nomarch (administrator of the nomos) and ministry. Even the Constitution of 1927, though leaving to local government matters managed directly by the citizens, left the definition of "local matters" so vague that the demes and communes were at the mercy of the legislators and ministries who, by law and decree, could "outline their powers, procedures, and revenues." [4]

Metaxas, after abrogating the Constitution of 1927, imposed on the total Greek population "modern" methods of hygiene, childrearing, and education. He even attempted to introduce early weaning and the use of bottles. In community affairs, local elections were abolished and local officials could be dismissed and replaced by the Minister of the Interior.

Today, according to one authority:

> The local government units in Greece are demes and communes. There are 217 demes and 5,746 communes. Demes, under the 1912 law, were those units with 10,000 or more population; but recent amendments allowed so many exceptions that there are now 144 below this minimum standard. Communes are supposed to have 300 or more people and an elementary school; but this standard was also relaxed so that now there are many below this figure. As a matter of fact, half of the communes today have less than five hundred inhabitants.[5]

Since such small population centers cannot support all of the expected services, some kind of amalgamation of units is thought desirable. But how

1:Sanders Z-5,4 (1952-1959) 1962 EH1 Greece EH1

631 642 this is to be worked out puzzles Greek politicians as much as it does American politicians interested in United States counties, laid out in horse-and-buggy days and ill adapted to today's rapid-transit world. In any combination, one center will gain and the other lose, a fact which has local political repercussions in a democratic system. Some of these become apparent as one views the work of the community council and its president.

The Community Council

207 In Phrangista, a mountain village of Central Greece, I was shaken out of pleasant contemplation as two loudspeakers on the village square suddenly began to inform one and all of the latest news of the day.

275 243 247 This was in the spring of 1953, and we were on a coffeeshop verandah newly made of concrete. Across the dusty thoroughfare, some hens had discovered wheat sheaves drying in front of the house of the carpenter; next door, potted geraniums were blooming in the window of a handsome stone house. We were shut in from the outside world by hazy mountains.

262 The proprietor's wife and daughter had just brought us preserved walnut sweets in a spoon with the traditional glass of water. One spooned the sweets, gulped the water, and commented on the good flavor of the walnuts preserved before they had fully ripened. And then came the radio. These

207 177 loudspeakers, sounding forth noon and evening, featured the broadcasts from Ioannina, Patras, and Athens. The radio, obviously much more powerful than the battery sets frequently encountered in the ordinary coffeehouse, aroused my curiosity. I turned to the president of the community

[422] council, who was sitting nearby. He told me that the radio was community-owned, that it had been placed there by the American Mission, and that it had "brought civilization" to that place. But the more I talked with him, the more I realized that bringing in civilization through this medium created some local administrative problems.

The American Mission, preferring to distribute the radio directly to the local authorities rather than through a regular government ministry, stipulated that the community would have to provide the gasoline for the motor which furnished the energy for the radio. So the first problem was to find the money to buy the gasoline, which cost a great deal by the time it was transported over the mountains from Lamia. A second problem was locating someone (in this case, two teen-aged boys) who could operate the complicated machine and tune in the radio. The president proudly reported that on the previous day a screw had worked loose and the program was temporarily interrupted — but only temporarily — for these competent youngsters quickly found the trouble and replaced the screw.

623 653 651 727 Before I left Phrangista, the president wanted me to see the church which the villagers had recently rebuilt. It had been completely and deliberately destroyed by the Nazis. The archbishop had given some funds for its res-

1:Sanders Z-5N (1952-1959) 1962 EH1 Greece EH1

toration, but most of the job had been done by "personal work" (*prosopike ergassia*). This is an old, old practice whereby the community council assigns the families or adults of the village so many days of "voluntary" labor on a task that needs to be carried out in the community interest. In general, a community may call for ten days of work (or pay in lieu thereof) from each able-bodied villager, although it need not do this if there are no projects requiring this much labor.

"Everybody who could," according to the president, "went to the quarries and cut limestone; others cut wood. We paid laborers to construct the lime kiln and then produced our own lime at a saving of twenty million drachmas [over $1300 then]. While the construction crews were building the new road through here, we brought the stones they unearthed to the church site and, with the help of good masons, put up the structure." Here again local government was getting something done.

On another trip in 1955, returning from a visit to Mount Athos, the Holy Mountain on a peninsula in Northern Greece, I saw a notice nailed to a plane tree near the main fountain of the village. It looked official, so we went up to have a look. It announced the auctioning off of the right to collect a certain kind of tax:

Announcement of Bidding for the Lease of Farming of Animal Sale Tax for Fiscal Year 1955–56

The President of the community of Neochori declares that . . . a bidding is announced for Sunday 17 June between 10–12 A.M. in the Community Building for the highest offer to lease the farming of taxes on animal sales during fiscal year 1955–56.

The amount of 3000 drachmas [$100] has been determined as the first offer and the amount of 300 drachmas as a guarantee to be deposited by any participant. The tax has been determined at two percent on any sale of animals. Citizens having debts in the community are not accepted. The amount of lease shall be paid in four equal installments, the last to be paid on 31 March 1956. All expenses will be charged to the lessor.

Here the local authorities were following the ancient practice of "farming" out the taxes to the highest bidder who, in turn, was expected to derive from rigorous collection much more than he paid for the right. Every time a bleating goat or an ox changed masters, the successful bidder would collect his 2 percent of the sale price.

The community council has other duties in addition to managing a community-owned radio, rebuilding churches, and collecting taxes. It conducts local elections as well.[6] By 1951 the political situation had stabilized to the point that local elections could be held throughout the country. Of the registered voters, a greater proportion of women than men voted, thereby showing their appreciation of the right of suffrage. From nine to thirty-one

1:Sanders Z-5M (1952-1959) 1962 EH1 Greece EH1

councilmen could be elected in demes and from five to fifteen in communes, on the basis of population.

An account of local officialdom taken from almost any commune in Greece closely resembles that from other communes, although the number of council members may vary. Here are the facts for Gourie, near Mesolongi on the western coast of Greece.

The village has the following officers: a president and a deputy president, who replaces the former in his absence. The president is the paid governmental representative in the village. The secretary is a salaried, permanent employee of the community, whose duty is to keep all community records, conduct all correspondence, and do all other clerical work. The village council: it is the duty of this council to help the president solve the various community problems, to attend regular meetings and take the necessary resolutions. The councilmen are unpaid officers; the president is paid a yearly allowance of one thousand drachmas for his extra expenses. The council and the president were elected during the last national municipal elections. Later the president was elected by the councilmen.

The old school building is now used for the community office. This has two rooms; one is used for the president's office and the other for the secretary's; its furniture is very poor; it has six chairs, a divan, and a bookcase used for filing.[1]

Of course, villages differ in the facilities provided for the community-council officers. In Tsepelovo, an Epirus village, the office of the council was well furnished. Cushioned benches lined the walls. Other furniture included a long table at which the secretary worked; a storage chest; a glassed, built-in cabinet containing shelves for filing; four straight-back wicker chairs; and another cabinet built into the wall which contained a store of medical supplies. The room was decorated with an *Ohi* sign, commemorating the refusal by Metaxas to capitulate to the Italians early in World War II, pictures of the royal family, portraits of local dignitaries, and two pictures of Eisenhower. Some American Mission material lay on the long table. This council, too, had the responsibility of taking care of the high-powered American Mission radio, similar to the one in Phrangista.

As I talked with the village officials here and throughout Greece, I tried to understand their conceptions of their jobs. I knew what the law stated to be their functions but wondered how closely their own ideas corresponded with the legal description. In an Attica village (1953) I found a council consisting of eight members and the president. The secretary there, as elsewhere, had no vote at council meetings, but introduced the topics on the agenda. I asked this secretary whether he considered himself an employee of the community council or of the central government. In Communist countries to the north I had known that the secretary of local government was usually a trusted Communist imposed on the community and

1:Sanders Z-5,4 (1952-1959) 1962 EH1 Greece EH1

therefore the guiding hand in local affairs. But in Greece I found no such use of the secretary's role. He generally considered himself a servant of both the state and the local people. In this Attica village the secretary said: "I do all the difficult work. I am kept so busy that I even work at night. Recruiting for the army, for instance, is done through me. I was awakened at five this morning by a man who wanted a certificate. I am also head of post and telegraph here. This is an unusual job for a secretary but the local government couldn't afford such an official and asked me to take on the job. I reckon I must work eighty hours some weeks." But he seemed to be thriving on his job.

When I inquired more carefully into what the council does, I learned that, in addition to collecting the taxes, it has the problem of determining what families are poor enough to qualify for welfare assistance. The president and two other citizens comprise a committee on social welfare and classify families according to need. The two citizens had been selected by the Ministry of Welfare from a list of nine local people nominated by the president, and they serve two years. The poor people are officially listed according to categories A, B, and C, which are based on family income and size of family. The poorest (A category) will get free medical care, free hospitalization, free maternity service and free drugs at the expense of the Ministry of Welfare. Those in category B are entitled to the same advantages, but have lower priority in the event sufficient facilities are not available to all. Those in C category must pay for their drugs, but at reduced prices, with the price difference being made up by the Ministry of Welfare. Of the 560 families in this village, one half were in one of the above categories. Since everybody in a village knows everyone else's business, there is much discussion of the fairness of the list. A person in need comes personally to ask for help, but he may be removed from the list at the end of three months when the names must be reviewed.

Around Volos, in the villages on Mount Pelion, I found emergency welfare needs handled on a much less bureaucratic basis. The commandant of gendarmerie for the Volos area learned in March 1953 that many families in the villages on the eastern part of Pelion lacked food. Unlike those in the Attica village, these people had made no complaints. They ordinarily live on returns from olives, apples, chestnuts, and some potatoes, but storms had destroyed their chestnut and apple crop to the extent that they had received little income the previous autumn. By March, they were without funds to buy bread. Part of their poverty could also be traced to the number of times their villages had been pillaged by the guerrilla bands which had earlier operated in that area. Their clothes were a pattern of patches. They kept little livestock because pastures were lacking and because any lambs produced did not mature early enough to be sold at Easter.

The commandant, in view of these circumstances, asked help from the

1:Sanders Z-5,4 (1952-1959) 1962 EH1 Greece EH1

our way back to Athens the next day as evening began to fall, we saw Mount Parnassus, snow-topped, off to the west, and knew that beyond it lay Delphi and its sacred shrine. In an ancient land, peasants of today were still wrestling with the problem of hunger; and generous people — Greek officials, millers, truck owners and truck drivers, and supporters of the International Red Cross — were expressing a common humanity. Village presidents, or local government in action, were the final link between the outside world and those in need.

Other trips, however, left one in a different mood. In the Peloponnesos, as in many parts of Greece, I found villagers who did not feel very kindly toward their community president, even though they had elected him. In one place a peasant, not without a trace of prejudice, remarked: "My brother-in-law was president of the council when the village road was built. He and the council decided how many days men of the family had to contribute and we got the job done. But our president now is a poor type of political leader. He plays favorites. He does not promise anything for the village as a whole; he has no concern for a much-needed bridge at the place where your car almost got stuck crossing the stream."

In another village, an old man who had spent five years as a young man in the United States complained: "In community affairs we have to elect a president who is 'in keeping' with the government in power, or else we get left out. But many of our village presidents take revenge on those villagers who disagree with them. In the States, if you are a Democrat nobody cares." When I asked in what ways the president could take revenge, he said that the president could make unfair work assignments to a community voluntary-labor project, make unequal distribution of welfare goods, and create difficulties for a man trying to get a loan through the cooperative.

But in many ways the community council has some control over the president because it can outvote him on crucial issues. In fact, a council will frequently have real discussions since each member feels well informed on village matters, which is all they are supposed to discuss, and can reflect the ideas of his friends, followers, or his coffeehouse clique. As one Greek official said, "The community council is a lively element in village life. The only point to remember is that council members are not educated enough to measure up to their tasks."

Some brief insight into how this process works is found in the case of Stavroupolis, a village whose coffeehouses were treated at some length in the preceding chapter. According to John Photiadis:

> Stavroupolis and the three other villages which form the Stavroupolis community are incorporated, with their government located in Stavroupolis. This government consists of an unpaid nine-member council elected by vote every four years, and a salaried mayor. For specific projects and activities, special committees are appointed from the council members and sometimes non-coun-

1:Sanders Z-5/ (1952-1959) 1962 EH1 Greece EH1

622
623
cil members who are in some way connected with the project or activity. The mayor usually introduces topics for the approval of the council, but no action can be taken before the prefect of the area gives his final approval.

[208] In Stavroupolis, people respond quite emotionally to each method applied by the village government. Problems are discussed by the council before decisions are made and are discussed again by the male population in the coffeehouse with interest and emotion. . . . The village government's business is their business and these informally-made decisions are important since no project can operate normally or smoothly if their informal decisions are opposed.[9]

651 But no picture of local government is complete without some sketch of the tax and financial picture. According to the 1950–51 legislation, local governments gain their revenues from the following sources.[9]

Property Revenues
— For the use of slaughterhouses
— Grazing rights on communal-owned land

Dues and Excises
— Building dues, ½ to 1 percent of the amount of cost
— For the use of sidewalks, streets, and public squares
— Dues on hotels, beds, and bills
— Weight and measure excises; advertisement excises
— For the use of municipal and communal property, works and services including garbage and cleanliness, electricity and gas

Direct Taxes
— Tax on agricultural and forestry products: 2 percent mandatory, 4 percent optional
— Tax on cattle; tax on poultry and fish up to 3 percent of price
— Tax on vacant plots within town plan areas in demes over 20,000 and those in the capital area and Thessalonike area
— Tax on property which has gained value owing to deme or communal public works

Indirect Taxes
— Tax on sale and purchase of cattle
— Tax on olive oil dregs

Contributions
— Contributions determined by council not over 30 million drachmas per head in Athens, Piraeus, and Salonika; 15 million on other demes; 5 million in communes

[653] Personal Work
— In demes and communes under 10,000 population, men over eighteen work ten days a year. Also includes their animals and motor equipment

Loans, Donations and Legacies

Sale of Real Estate and Movable Property

1:Sanders Z-5,4 (1952-1959) 1962 EH1 Greece EH1

Although not all of these taxes apply directly to villages, some of them do. Mention has already been made of the personal work on community projects, as well as the tax on sale and purchase of cattle as evidence by the Neochori notice of bids for farming these out. In addition, there is a "head" tax ranging from twenty to fifty cents annually on each animal. A list of animals over two years of age is drawn up in March, or three months before the commune budget is due. Perhaps the most important of these revenues from the peasant point of view is the tax of 2 to 4 percent on his agricultural products, which the local government keeps. He pays this in lieu of a property tax on the land that he owns. When I explained to some of my Greek friends that property taxes were the chief source of revenue for many local governments in America, they asked if I meant agricultural land. When I answered in the affirmative, they were nonplussed and pointed out that it was much fairer to tax the products of the land than the land itself, since the products showed best of all the value of the land.

The Village and the Central Government

To understand the community council, one must see its relationship with the central government.[16] It does not, for instance, undertake to maintain law and order, since the local police are not under its jurisdiction, nor does it have much to say about its local school, except through an elected school board of limited powers. Even in those affairs where it is supposed to have jurisdiction, such as drawing up its own budget or arranging for the collection of taxes, it has to gain the approval of the nomarch, who is appointed by the Minister of Interior.

Only as I got to know some of the nomarchs did I begin to appreciate the relationship of the central to the local governments. One nomarch, Yannes Gotsis, was in charge of the nomos of Serrai in Macedonia in 1953. He seemed dedicated to his task and epitomized several of the qualities I have come to admire in many Greeks. We discussed the specifics of local government and the part that the nomarch plays, but he soon went beyond the technicalities of administration to something of its philosophy:

> In the majority of the Greeks there is a submerged desire to make a better future for as many people as possible. The Greek really wants a better community life, although he at times gives the impression that conflict is his basic urge. But along with his sense of community he has an appreciation for human personality, which means that if another person disagrees with him he does not try by force to get his own opinion accepted; he tries persuasion and explanation. If others continue to disagree, it is not because they fail to appreciate him but because they each have their own personality to put to the use of the community.

1:Sanders Z-5,4 (1952-1959) 1962 EH1 Greece EH1

631 This led into a discussion of some of the kinds of conflict which occur in
634 the community and the part the nomarch has to play in resolving them. The
location of a new village church sometimes becomes an issue. Many argu-
578 ments are not based on any vested interest in a particular spot but on the individuals' assessment of what would in actuality be the best spot. In order to get proof that his idea is better than other ideas, a person will leave his farm work or close up his shop and go to the city where he can get the advice of some authority whom he can quote to support him. Or several villagers in disagreement will decide to go to the nomarch to get his opinion.

631 On another occasion I went with the nomarch of Kozane to visit a village
634 for which he had responsibility. The agriculturist for this nomos, who had
come with us, introduced many of the peasants to the nomarch before the
623 meeting began at the schoolhouse. Eventually the meeting got started. The
653 nomarch, flanked on one side by the council president and on the other by the council secretary, got down to business in a most direct way. One man got up and described the condition of his home, in which he said
[727] he was ashamed to live. This village had been destroyed by the guerrillas and the need for help had been great. Because he had a special file for each village in his nomos, the nomarch knew that when he took office 75 percent of all the houses needed rebuilding but that now that figure had dropped to 29 percent. He reminded them that in his nomos there were four thousand families without housing or even an elementary roof over their heads, but said he would see what could be done. He then found out what they expected to do with the self-help program based on voluntary contributions of labor. He reminded them that on two occasions the state had given them about $1700 to help in the construction of a road to the village and that, in view of their present need, he would see if he could get another grant. This time he would pay wages so that they might have some much-needed income.

631 When we emerged from the crowded schoolhouse, I noticed that about
634 twenty men had stood outside trying to overhear what was going on. The
nomarch stopped to talk to some of them. When we had climbed into a
275 truck which was to take us across a muddy patch to our cars half-a-mile away, the black-robed priest came running up, an unkempt, unattractive fellow, to make a last-minute complaint to the nomarch. "Sir," he shouted, "did you know that the coffeehouse proprietor is now opening up on Sundays before the church service is over, which is contrary to the law?" The crowd looked amazed and eagerly waited to see how the nomarch would handle this troublesome complaint. He replied: "My good fellow, you go on and give them good enough sermons, and then the men won't want to go to the coffeehouse during church time."

631 Reference to one other nomarch will be enough to show the type of men
634 who were filling that post in 1953. Mr. Aronis was the nomarch of Kala-
369

1:Sanders Z-5,4 (1952-1959) 1962 EH1 Greece EH1

mata, at the southern part of the Peloponnesos. When we discussed the attitude of the peasants toward Athens and the central government, he commented: "Life in the village is difficult; Athens has had special privileges. The villages are 100 percent right in their complaints. In my nomos many of them have no roads, no irrigation or drainage. Their education is so far behind that it is pitiful; their homes are in awful condition. How can a peasant under such circumstances feel gratitude! Paying for the priest and the teacher should be the job of the central government in the same way that a father supports a child. The recent decision to turn back to the communes a share of the tobacco tax is encouraging the villagers very much. Here it will amount to about one dollar yearly per capita."

When I asked him more about the actual workings of the communes in his nomos, he repeated much that others had said:

> The president of the community represents in a small way the national government. So the community council is both an arm of the central government and also a representative of the local village. All decisions of the council have to be communicated to the nomarch; this is compulsory. If the council and president decide to spend any of the local funds the nomarch has the right to say "yes" or "no." If they wish to add a paid employee, the nomarch will check to see whether it is legal or not. If the nomarch does not answer in two weeks' time, then the local council has the right to go ahead without further permission. But the villagers for the most part are not conscious of their rights after the expiration of the two-week period and are capable of waiting fifteen years. The chief reason for delays in such matters is the lack of sufficient personnel in the nomarchy.

During 1952–53, the possibility seemed strong of developing a capable, well-trained group of nomarchs, all of whom were supposed to have security of tenure and not be subject to dismissal except for carefully defined "cause." These nomarchs were being sent to England, the United States, and elsewhere to study how local governments functioned, and to see what ideas might be adaptable to Greece. The community presidents, over and over again, expressed appreciative comments on the work of many of these nomarchs. To be sure, in some villages I found that the nomarch had not yet made himself known, but I had the general impression that a much better relationship was building up between the peasantry and the national government because of the changed attitudes of friendliness and understanding on the part of these key officials. When I revisited Greece in 1955 for another study period, I found that the Minister of Interior in early March 1954 had rescinded the career-nomarch legislation and had immediately dismissed one third of the nomarchs. According to one observer:

> The odd characteristic about these dismissals was that they were not necessarily based on political opinions nor on efficiency. Several strongly-pro-government nomarchs were dismissed despite known efficiency. Apparently this arose

2:Friedl E-5 (1955-1959) 963 EH1 Greece EH1
Vasilika

west but on the same side of the road is Vasilika's cemetery. It is a small square area outlined by tall cypresses standing just inside the low stone wall which encloses the graves and the small church of St. Nicholas. Mass is said in this church in celebration of the birthday of its patron saint on December 6th. Sunday afternoon Easter services and funeral ceremonies are also held there.

Past the cemetery the road turns east, runs through the village, and constitutes its main street. Almost all the buildings of Vasilika are ranged for about one-fifth of a mile on both sides of this dirt road. Most of the houses are on the ridge side of the road; a single row of structures lines the field side. As one continues east on the village street and looks to the right on the field side of the road, he first sees fields and then the old school building. The next structure is the main church of the village, the church of St. Athanasius. It is the largest building in the settlement, and, like most of the others, it is constructed of field stone. Regular Sunday masses, Christmas and Easter services, baptisms, weddings, as well as the majority of saint's day and other special liturgies are conducted here by the village priest. The bell in the campanile of St. Athanasius summons the villagers to church, the children to school, and the men to an impromptu public meeting on the rare occasions when one is called to discuss village affairs. And, inevitably, the tolling of the bell announces the death of one of the villagers.

Separated from St. Athanasius by a very narrow alley stands a one-room structure which serves as the office for the village government. It now has a telephone, the only one in the village. Near the village headquarters and still on the field side of the road lives the owner of a combined store and coffeehouse. A ground-floor room of his house contains merchandise such as matches, cigarettes, lemons, salt, sugar, canned vegetables and fish, aspirin and penicillin, thread, and miscellaneous small items, while the outside space in front of the store is reserved for chairs and tables. From this coffeehouse, on the field side of the village, the rest of the structures are homes and their outbuildings, roughly in a line near the road.

Starting now at the western end of the village, and looking east at the ridge side of the road, one sees houses and their outbuildings occupying the lower third of the ridge. The uppermost group of homes were, in 1955, reed huts in which some of the shepherd families lived. Other reed huts served as storage houses. By 1961, the dwelling-huts had all been replaced by new brick houses, already wired for electricity but otherwise in various stages of completion. On the ridge side of the road the only buildings which are not exclusively used as residences are, first, another combined store and coffeehouse, which stands on the street diagonally opposite the first and is also a room in the house of its owner, and second, a nearly completed stone reservoir.

Finally, some two hundred feet past the last house and slightly up the slope, stands the small church of St. Cosmas and St. Damian, the patron saints of the village. Here the village celebrates its *paniyiri*, its patron saints' day festival, on the first of July. Mass is celebrated in the morning, and villagers from the surrounding countryside fill the small edifice to overflowing. Occasionally, other masses are said at this church in the course of the year. Except for the

The Village: As a Community

The Village Government

621 IN THE FIRST CHAPTER the village was described as a setting for the life of families, which are the most significant social groups in the settlement. It now becomes possible to consider the functions of the village itself as an entity in its own right. First, the formal organization of village-wide activities and responsibilities will be discussed, and second, the attitudes of the inhabitants toward Vasilika in contrast with their attitudes toward the family and the nation.

[631] The Greek government classifies Vasilika as a *kinotis* for administrative purposes despite its small population. A *kinotis* is legally a populated center with at least 300 inhabitants and a school, and constitutes one of the four kinds of administrative subdivisions in each of the nomes (provinces) of Greece.

622 The formal governmental activities of the *kinotis* are the responsibility of
623 a locally elected president and council. A community the size of Vasilika is
665 entitled to a council of five members elected for a four-year term. Voting must
666 be done along party lines; and voters select five names from among those listed by the party of their choice. Vasilika had only two political parties in its local elections in 1956. Under the system of proportional representation then operating, the four men with the most votes from the party which itself had the majority of votes were elected to the council. The fifth member should have been the man with the most votes in the minority party. At the last Vasilika election, however, the man in this position preferred not to act as a minority representative and the second man on the list became the council member. The five representatives then elect a president and a vice-president from among their number, usually for two-year terms. The council and community are served by an additional official, the secretary of the *kinotis*. The secretary is not elected and has no
624 [634] vote on the council. He is appointed by the nomarch (governor) of the province upon nomination from the village council. His salary varies with the income of

2:Friedl E-5 (1955-1959)1963 EH1 Greece EH1
Vasilika

the community. The secretary tends to remain in office for many years, thereby becoming the equivalent of a permanent civil servant.

The president is held responsible for the completion of the tasks assigned to him and to his council. These include registration of births and deaths, a census of males every five years, the physical maintenance of the roads and public wells in the village, the preparation of the community tax rolls, and the preparation of an annual village budget.

In a community the size of Vasilika the maintenance of vital statistics is not an onerous task, since births, deaths, and the age and sex distribution of the population are matters of common knowledge. The maintenance of village property is a more complicated matter. Funds for materials are available in the village's account, which is held by the treasury at Amphiklia. The community may not draw on its account without the approval of the nomarch. Therefore, any public works program in the village is first formulated by the council and then sent for final approval to the nomarch's office. Village males who are more than fifteen years old are responsible for providing labor for road building and for minor repairs of village property. They may either give a certain number of days a year to work on such public projects or fulfill the obligation by furnishing money for a substitute. There is no effective practical way of enforcing adherence to the commitment. The state of the village roads and wells depends, therefore, on whether the village men are willing to work together to create a village asset.

In the course of our 1955–1956 stay at Vasilika a special impetus for road repairs presented itself. The council had requested that one bus a day traveling between Kifisokhori and Levadhia be rerouted so as to pass through the village. The nomarch had indicated that he would approve the change if the village road was repaired, and he authorized the necessary materials. One day in March, truckloads of earth were brought into the village and about one quarter of the adult male population shoveled the loose earth into the main ruts on the village road. The road was superficially improved thereby, and a month or so later a bus was routed through the village. The poor drainage from one of the wells was not corrected, however, so that the regular spillage from the well quickly restored the old puddles in the road.

The men and boys who worked on the road project lacked their customary vigor. Indeed, the majority of the male population of the village claimed to have work to do in the fields that day and did not join in the road work at all. There was much joking, teasing, and clowning while the work was going on, and the efforts of two of the older men to convince the group to set to work with a will were unavailing. The attitude of the road workers requires explanation because all the villagers were agreed on the importance of the new bus route and they actively dislike mud. The muddiness of the village road in winter and early spring was a particular subject for comment and several times evoked the question, "Do you have mud in America, too?" An Athenian who visited the village in late spring was critical of the villagers because their *aghora* was unpaved. "Don't you have a lot of mud all winter?" she asked. "Oh no, we don't have any mud in winter. Very little," was the response from one of the villagers. He would not even admit to so unsightly a condition.

2: Friedl E-5 (1955-1959) EH1 Greece EH1
Vasilika

653 The reluctance of the villagers to work on the road seems to result not
461 from a lack of motivation but rather from a more compelling distaste for manual
491 labor, and especially for such work when it does not directly or immediately benefit each man's own family. Several years later when a new school was built, some of the parents of the school children helped with parts of the construction. The other villagers did not.

651 The preparation of the community tax rolls is an important responsibility
623 of the village council. Since taxes are based on land tenure, on produce, and on livestock ownership, the council must prepare lists of people who own land within the boundaries of the *kinotis*. The lists include for each person information on the number of *stremata* in each parcel of land he owns, on the kind of crop raised on each parcel, and on the quality of the land. Lists of the number of horses, mules, sheep, and goats owned by each villager are also compiled. Donkeys and chickens are not taxed and no listing is made of them. The tax is calculated for each item and the completed tax rolls are posted. A villager may feel that he has been unfairly treated, that, for example, the quality of his vine-
[627] yard has been overestimated or that he has fewer sheep than the number listed. In such a case he can request a revision from the council. His request is usually granted and that settles the matter. If he is not satisfied, he may ask for a hearing before a grievance committee, the members of which are proposed by the council from among the villagers. Any decision of the committee is subject to
[634] the veto of the nomarch. In Vasilika disputes over tax rolls are said not to occur,
651 and no grievance committee has been established for many years. There had
628 been a dispute with Parori in the 1930's over the boundaries of the two com-
692 munities. Since each *kinotis* receives taxes from the land within its boundaries the question of where one *kinotis* begins and the other ends is of considerable importance. The argument between the two villages was finally settled in the courts.

641 In connection with the preparation of tax rolls, the president has some
651 power over the shepherds living in the community. Anyone classified as a non-
621 resident of Vasilika must pay double the rate for pasturing his animals there. If
433 no permission has been granted, he must pay triple the rate for residents. The question of when and if the new settlers in Vasilika—the shepherds, who had
[622] been living there since 1950—would be considered residents of Vasilika, that is, full-fledged citizens of the *kinotis*, was of significance both to the village and to the shepherds. They were finally granted this privilege in 1959.

423 The actual process of preparing the tax rolls consists of a series of agree-
651 ments among the villagers, including their council members, as to what amount of property they will declare. In consequence, the tax rolls do not necessarily
[623] represent an accurate and complete accounting of property ownership in the *kinotis*. Farmers often try to hide some of their holdings and keep some of their
[593] transactions quiet. For example, in order to pay less in taxes on the value of dowries, the records may show the transfer of a smaller parcel of land to the groom than the one privately agreed on and later privately carried out. Records
[652] are probably being kept more accurately now, since credit from the Agricultural Bank is based on land holdings, and proof of ownership must be given to the bank.

2:Friedl E-5 (1955-1959)/43 EH1 Greece EH1
Vasilika

The village council also has initial jurisdiction over monies which are not derived from the taxes already mentioned. There is a levy amounting to two percent a year of the value of the cotton and wheat produced by each farmer, three percent of the value of any inheritance, and three percent of the value of money and property given as a dowry for any village girl. The proceeds of these taxes are deposited in the village account in Amphiklia. A tax on tobacco production is paid to the national government. The amount collected from the tobacco tax is redistributed to all communities in Greece on a per capita basis for schools, roads, and the like. Tobacco-growing villages like Vasilika receive an additional sum in proportion to the quantity of tobacco produced in the community.

Initial jurisdiction in the disposal of all monies belonging to the *kinotis* consists in the preparation of the village budget by the council. The task is done under the close supervision of the nomarch's office. Printed forms for village budgets are available at stationery stores and must be purchased and used. The form includes a list of items for which the community may be expected to spend its money and another list of items from which income is derived. It is the secretary's work actually to fill in the form in quadruplicate. He does so at a meeting of village secretaries called by the nomarch and held in Levadhia. The forms are then checked by the nomarch's office and some changes may be imposed. The expenses listed on the form include the secretary's salary, the salaries of the two village policemen, the salary of an assistant treasurer in Amphiklia, whatever is due the tax collector (who seemed in 1956 to be getting six percent of the amount collected), rent to the church for office space, several newspapers brought by train from Athens each day, books for the school (but not for individual students), road repairs, and the like. The completed document becomes, in fact, a theoretical model for appropriate village income and expenditure rather than a reasonable estimate of future financial transactions. Some of the income actually will be deposited in the account of the village and some of the expenditures will be made, but most will not, and even those transactions that do occur may not be made in the sums designated in the budget.

Let us consider income first. The collection of taxes from the farmers is not carried out regularly. When no collector comes to the village, the farmers are supposed to go to Amphiklia to pay their taxes, but few do so. During our stay in the village, a new collector came to Vasilika and sat in the *aghora* for an entire day accepting money from the farmers. They paid only part of their previous year's assessment, and so remained a year in arrears. The interest charge on late tax payments is only sporadically collected from the farmers. Just as the collection of monies is irregular, so is the payment of salaries and the expenditure of other funds. For example, the secretary at one point had not received his monthly salary of 350 drachmas for several months. The use of monies for other purposes depends on the interest of the villagers in village projects, and for the most part such interest is lacking. The village governing body and the secretary fulfill the formal responsibilities placed upon them by the national government, but do not seem to feel that the forms must reflect reality.

It is clear from the foregoing that in the formal political organization of Greece the village council has little power even over affairs for which it has some

2: Friedl E-5 (1955-1959) 963 EH1 Greece EH1
Vasilika

623 responsibility. The collection of its monies is undertaken by the central government's financial officers directed from Amphiklia, and the expenditure of its monies is supervised and controlled by the officers of the *nomarchia* centered in Levadhia. Moreover, the council has neither responsibility nor power over other village-wide activities. Law enforcement and the operation of the village school and of the village churches are administered separately both from the council and each from the others. Before turning to these activities, some mention of the council's role in Vasilika apart from the formal expectations is appropriate.

[829] [622] It is indicative of the village attitude toward the council, in contrast with that toward the president, that at no time during our stay in the village was any man pointed out to us as having the status of council member or as having had it in the past. When, accompanied by several villagers, we visited the former schoolteacher of Vasilika, he asked us who was currently the president but did not ask about the council members. The president has an important role to play 622 in the minds of the villagers. He is expected to act as liaison between them and 829 other governmental units and to further the interests of Vasilika in whatever situations may develop. For example, there was some criticism of the president for not arranging more rapidly for the bus to come through the village. In 931 early April 1956, an unexpected and heavy rain flooded the fields and threatened 312 to destroy the wheat if the waters did not drain off quickly. Most of the vil- 208 lagers (not all, however) were agitated, and in the early morning groups of men 521 climbed the hill and looked out over the fields shaking their heads and lamenting, "*Katastrofes*!" "Catastrophy!" Then came the discussion of why the fields were not draining properly. All day, in the coffeehouse, the men inveighed against the English company which had owned the former Lake Copais land for setting up a drainage system that did not go beyond those lands; against the Greeks who took over the company for continuing a system that, the men insisted, not only did not drain the lands of Vasilika, but even made it subject to flooding; against the government for not having built a proposed dam that would have protected the region; and against the village president for not immediately calling on the nomarch's engineers to suggest remedies for the present situation. For days after, there were rumors that the nomarch's technical staff would meet with the president and councils of Parori and Vasilika to arrange a public works program of low dams to protect the area from possible future disasters from the same cause. The meeting never took place. Some villagers 731 blamed the situation on the unwillingness of the farmers to work together to 312 build their own small dams. One man had earlier tried to protect his own 208 fields by building low earthen dikes around them, but his work was wasted because the surrounding fields were not so protected. The morning after the storm some of the men had quickly built up a two-foot dam at an obviously vulnerable spot near the cemetery. But a villager pointed out that if the water had risen just a little further, the placement of the dam would have made the situation worse rather than better. There was no more rain; the waters gradually receded; each man watched for his own fields to dry out. Those who were left with one or two small plots that were so badly flooded as to be useless for

/24 cont./

Harvest time is the best season for the lovers to express their love to each other. It is the time for the seasonal rush work at which people help each other. Groups of /25/ people work together and when returning home late in the evening both boys and girls sing songs that they compose in which they express their interest to each other. When parents do not agree on the proposal of the son for a certain girl, the only way to get away with it is to decide to run away with the girl.

The breaking of these holy traditions the older men of the village think is due to the railroad station which is so close to the village and the influence of city life. Another important factor that has poisoned the life of their village was the labor that started coming to the village for work. During the tobacco and opium crop years when labor was needed, the village at some seasons doubled its population with the addition of foreign labor. These people brought in short dresses, hats, silk stockings, high heel shoes and European dancing. With the passing away of these crops due to depression years the labor left the village but their influence stayed behind especially among the young. The priest, the teacher, and the "Gerousia" of the village tried hard to drive them away but all in vain.

The younger generation found a better way to give a solution to their heart's desire when their parents /26/ objected. Young men will help each other in running away with their girls. A group of them will guard the road from which the girl will pass either with knives or guns. As soon as she appears they stop her and put her on the horse with her sweetheart. While the couple goes to the designated village the rest of the group give a fight to the opposing party. The young couple appear before a priest in the other village and perform the religious ceremonies. Then their return to the village is settled by the friends of the couple. Cases of this kind are increasing in Megali Vrisi. Centuries-old traditions that have enslaved the free expression of men are being torn down and the youth find himself in freedom of self expression.

/29 cont./
leave school the second or third year and often with ill health. Two of the young men died from T. B. in Megali Vrisi. Both of them were in High School for two years.

Discipline. Besides the local school which plays /30/ a large part in discipline, the established morals of the village disciplines the youth. The part also of the grandparents and especially that of "Gerousia" is important. The most effective type and enforced one is through "Gerousia".

The stick at home and at school still has its blessings, since according to the philosophy of the villagers it came out of paradise. Even married men sometimes are subjected to this stick punishment by the parents without any complaint. The teacher keeps it on his desk and one corner of his office is filled with reserve sticks to use in case one breaks. When a teacher has 175 students of six grades, there is no time for explaining why and how, the stick enforces everything.

Political and Religious Training in the home. The political training is formed and reshaped in the coffee house. The convincing speakers and those that can read newspapers usually influence the rest. Coffee houses are places for recreation and the exchange of ideas, for forming political beliefs and for deciding important decisions for the community. Its function as a coffee drinking place is of minor importance.

The name does not mean very much to the average person who does not have experience of the coffee house. The number of coffee houses usually denotes the magnitude /31/ of the conflict groups and the amount of leisure time the farmers have. The coffee houses, besides being the place where one sips his coffee and plays his "tavli", are also centers for drinking from soft to strong alcoholic drinks. Quarrels, conflicts, political discussions and gambling take place in the coffee houses. With all these evils, still the coffee house is one of the best social centers, and centers where the common farmers exchange ideas and become aware of the current world political problems. It is the center

[Caucasus]

/84 cont./

The village was ruled by "Gerousia", a group composed of old respected people. It is interesting here to note that even today the Greek Senate is called "Gerousia". This "Gerousia" would meet when necessary to discuss certain problems concerning their village. They had no definite calendar for meeting nor approved place for meetings. There were two dates well observed for meetings. One was St. Demeter's day -- October 26th -- for deciding to hire a village shepherd for the cattle and a guard for the fields. Another meeting which was fairly definite, was St. Constantin's day -- May 24th -- at which the redistribution of the land was decided for the coming seven years. It was one of the well-observed economic principles to redistribute the pasture for farming and leave the cultivated land for pasture. Due to the increase or decrease of the family members the land had to be redistributed /85/ according to the number of heads in the family. Once the land was given, the owner could use it as he pleased but could not pass it on to the relatives or friends. The land belonged to the village. There was another order which every one had to follow strictly. No one was allowed to increase his livestock on the community pasture, but he could increase it on hired pasture land from near by villages.

621 623 621 423

Away from every kind of complicated civilization the Caucasians had a world of their own and found it better to preserve it centuries after centuries without adulterating it with the modern civilization.

621

Most of the church, school and community problems were solved by the "Gerousia" without a general meeting or vote. The decision of "Gerousia" on any problem was final. Local conflicts and neighborhood grievances were taken care of by "Gerousia". Repairing school buildings, or church, or taking care of the poor and unfortunate were closely followed up by this group.

621 623

This cooperative spirit for mutual aid is rarely found among any people except the Caucasians. /86/ The rush harvest season is shared alike by all. Building houses, threshing and transportation of agricultural goods is done through borrowed labor. If any, by

a twin, and when they mourn they mourn together. Their sentimental songs are always tinged with the air of sadness. Even at the funerals they sing the same songs which they sing when they have a merry time. Mutual aid is the characteristic quality of the Caucasians in their work, in their joy, and in their sorrow. On the contrary, the Thracians are strictly individualistic and regard mutual aid as the sign of laziness.

/90/ Conflicts. Regardless of the mutual aid and the cooperation they have, the conflicts are very prevalent. They occur either among the two groups or among the members of one group. The causes of the conflicts are for controlling the village cooperative, the mayorship of the village, or as a consequence of a proposal to marriage which was declined. It is important here to note that regardless of the conflict situation if the "Gerousia" wanted to finish a certain community project they all shared alike the burden. In spite of the official power the cooperative has and the organized super-imposed government mayor has, the "Gerousia", the unofficial body of old men is the real axis or the center of any unanimous movement. Conflicts which are temporarily settled by the mayor or by the goverment courts eventually reach the peaceful settlement of the "Gerousia" who know so well how to make the people forgive each other. The judge at the courts reads the law and enforces the punishment according to the act, but "Gerousia" knows so well the past of every one and even the type of family for one or two generations and touches the pride of every one by enumerating the good qualities and good dispositions of his father or grandfather. The position of "Gerousia" is that of a father and the effect they have on the person is lasting. Jealousies, small /91/ fights and family difficulties are settled by "Gerousia". This group is a government within a government, officially unknown, but it stands as the only guiding hand for the village community. At times of great distress and difficulties, people consult the "Gerousia". The church, the priest, the teacher and the doctor do not have as constructive an influence as the "Gerousia" does. It is not a voted body but has the unofficial

/91 cont./
general approval of all. The punishment of the "Gerousia" is ostracism until the person repents and asks forgiveness. The fear and respect towards "Gerousia" is greater than to anybody or group of people. One of the young men planning to divorce his wife because she could not bear any child, told of his experience with the "Gerousia". "Their words are sharper than the sharpest sword".

Latent Neighborhood Conflict Attitudes. The jealousy of the nearby villages toward the successful cooperation of the villagers of Megali Vrisi was noticed many times. The success of Megali Vrisi in bringing the doctors who serve the area to their village, and in making it the center for the health project, naturally created hard feelings with the competing villages. The success with which the Caucasians of Megali Vrisi worked /92/ in organizing a young men's organization, increasing the number of teachers, building their church and having one of the well-organized cooperatives, has made it the leading village of the area.

621
578

Active Conflicts. One of the active conflict that exists in Megali Vrisi is the one between the Thracians and Caucasians. Each group in trying to preserve its identity tries to dominate the other by having more power in controlling the village council and cooperative. The Thracians as a minority, have never had any chance to get to any office for the last 16 years. The strong opposition they had from the Caucasians, united them on every question raised, and their inability to compete with the Caucasians has developed within every Thracian the illogical type of opposition. "Vote it down if it is a Caucasian proposal, whether good or bad." Regardless of this opposition, the Caucasians undertook to carry on their constructive community work by bearing the share of the Thracians too. Conflicts among different kinship groups were of a minor type and never developed to such a magnitude as to have destructive results. The "Gerousia" checked them.

627

The conflict between the Thracians and the Caucasians was beyond the power of the "Gerousia". The Thracians never had any "Gerousia" and as a result took more cases to the court and spent more /93/ money and time for it. The conflicts among the

Thracians were of the worst type and usually would end with bloodshed.

Social Control, Formal and Informal Aspects of Control. [623]
The "Gerousia" usually exercised a degree of informal control over its members through its generally-accepted definitions of what is right or wrong. The government courts had little influence in this. There was no stealing among the Caucasians; many families would leave their houses unlocked and work in the fields; their implements scattered in the yards and the poultry nests out in the open. [692] [685]

Drinking is among the forms of behavior against which the women of Megali Vrisi voice their disapproval. All the men drink, but actually there are few who drink for the sake of getting drunk. When I ventured to ask some of those who get drunk, "Why they do it", almost everyone of them said, "to forget the miserable life". Some of them, due to deportations and wars, have lost all property, wives and children and the only comfort they find is to get drunk and get sentimental and weep. 626 273

/94/ Community Events. The recently organized community fairs represent the inception of social organization for the promotion of recreation. The purpose of these fairs was competition in agricultural products and wholesome recreation, which meant so much to these villagers, but social conflict soon discontinued these fairs. Outsiders were invited to talk at these occasions and athletic events would give it a happy ending. 543 621 476 578

The Use of Leisure Time and Visiting. One of the major problems that confronts every one working in Megali Vrisi is how to use the excess leisure time more profitably. This excess leisure time is the cause of conflicts and drunkenness. Due to the nature of their agriculture the rush work season comes in the fall for two months and two months in summer. The rest of the time very little work is done in the fields. During the winter months from December to April there is no farm work except the chores which are done by the women. This long slack season is an acute problem for the farmers themselves. From morning until late in 461 517 241 [578]
